

## eLOCK eXpress

Think mobile.  
Close smarter.  
It's easy.  
Electronically!

# Innovative opportunities

## Key chaos? Create order electronically!

Many employees have to carry a heavy load on their key ring, as they have so many doors to open: Driveway, main entrance, hallway and security entrances, as well as those to one's own work area. Everything becomes easier electronically: With eLOCK eXpress, everyone has only one key for all doors!

## Replace the lock cylinder? No longer necessary!

If a mechanical key – in the worst case the master key – is lost, security is no longer guaranteed. Often the only solution is a complete and expensive cylinder replacement, including new keys for all employees. With eLOCK eXpress, the lost key is simply blocked and reissued: Everyone else can keep their keys!

## Individual access times? Simply manage!

The building cleaning service should have access on weekdays between 7:00 pm and 11:00 pm, but another service provider only has access on Saturdays from 7:00 am to 4:00 pm. How can this be managed? Electronically with eLOCK eXpress: Access rights and times can be individually defined for each key and each door!

## Change of staff? No problem!

When employees leave your company or new ones arrive, this is often associated with a lot of administrative work in terms of locking technology. A classic key box and a key book are one option, eLOCK eXpress is the more convenient one: Old employee keys are simply deleted and new ones are individually configured and activated!

# Locking with system

The added convenience, flexibility and security make the eLOCK eXpress electronic locking system the first choice. For practices, law firms, retail, craft trade, gastronomy and other small and medium-sized businesses, but also for specialist security shops. eLOCK eXpress opens up convincing advantages for everyone!

# eLOCK eXpress

## Door components

Knob cylinder      Half-cylinder

### Cylinder

- Cylinders tested for DIN EN 15684 compliance, for internal and external doors
- Versions available for emergency escape routes, with single-sided and double-sided authorisation checks and waterproof function
- Easy to fit in existing Profile cylinder locks
- Cylinder lengths retrospectively adjustable
- Knob cylinder available in three variants for the mechanical inside knob

APS Comfort system

### Comfort system

- Perfect combination of usability and design
- Integration into any object design through minimalist design of the antenna caps
- APS Comfort system for timber and tubular frame doors; can be used for internal and external doors, fire protection doors, emergency exit routes

## Simple. Individual. Flexible.

Wall reader in Siedle housing      Wall reader

### Wall reader

- Control and opening of automatic doors, door openers, elevators, barriers and gates
- For surface and recessed mounting in internal and external areas
- Can be combined with commonly-used switch and intercom ranges from leading manufacturers

*„eLOCK eXpress is ideal for small and medium-sized companies looking for user-friendly and convenient systems.“*

*„eLOCK eXpress is quick to programme, easy to use and simple to manage.“*

## For small and medium-sized companies.

## Transponders

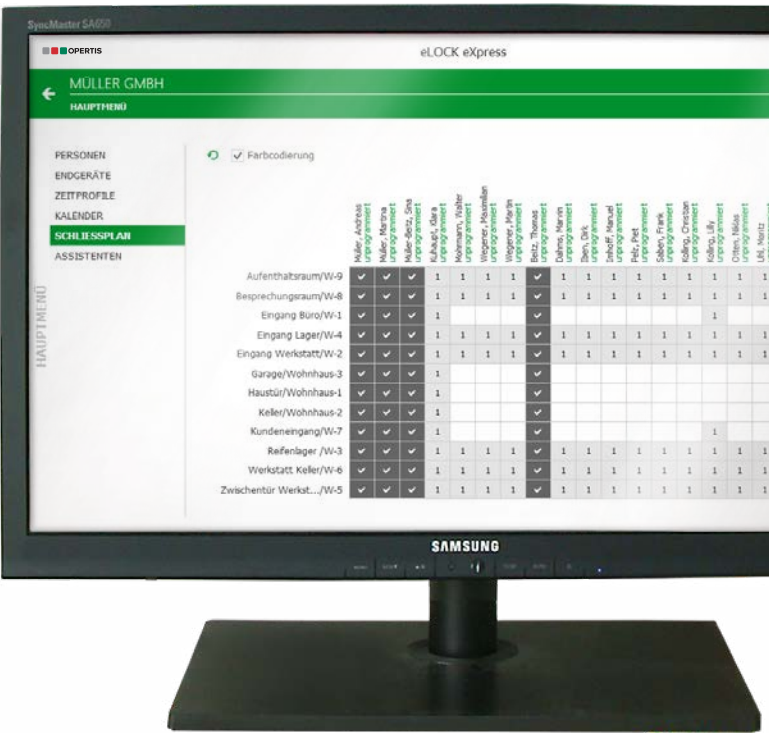

Key fob      ISO card

### Transponders

- Different types of MIFARE® transponders (Classic, DESFire®) can be used in a locking system at the same time
- Combination of transponders already present in the property can be implemented without any problems

## Programming options

### Programming options

- Clear processes for programming transponders and door components
- Modern and simple software structure for a perfect overview
- Management of the locking system via several programming devices possible at the same time without the need to network PCs or tablets
- Optional programming of door components via ToDo card
- Programming of the door components and transponders directly on the PC or tablet using the NFC stick
- Lost keys can be blocked, locking authorisations adjusted or time profiles created in a short time
- Access to doors can be logged if required

*„The eLOCK system also impresses with its design, which can be perfectly integrated into architectural concepts.“*
